Bastion Replacement Removal

Overview

What is a Bastion Host?

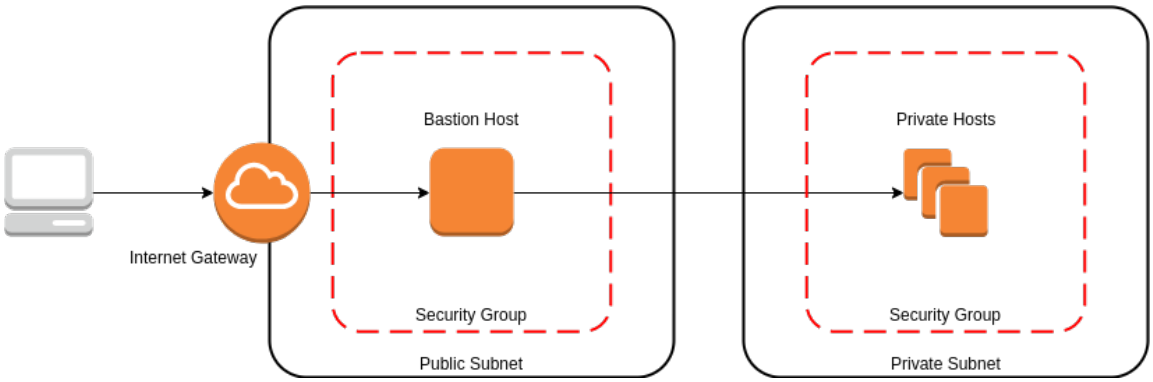
A bastion host is a server whose purpose is to provide access to a private network from an external network, such as the Internet. Because of its exposure to potential attack, it's important to lock this down as tightly as possible.

How can NetFoundry Help?

Deploying a bastion host setup with NetFoundry is more secure! Why? Because the bastion doesn't need to be directly accessible from outside networks. It only needs outbound access & can reside in either public or private networks.

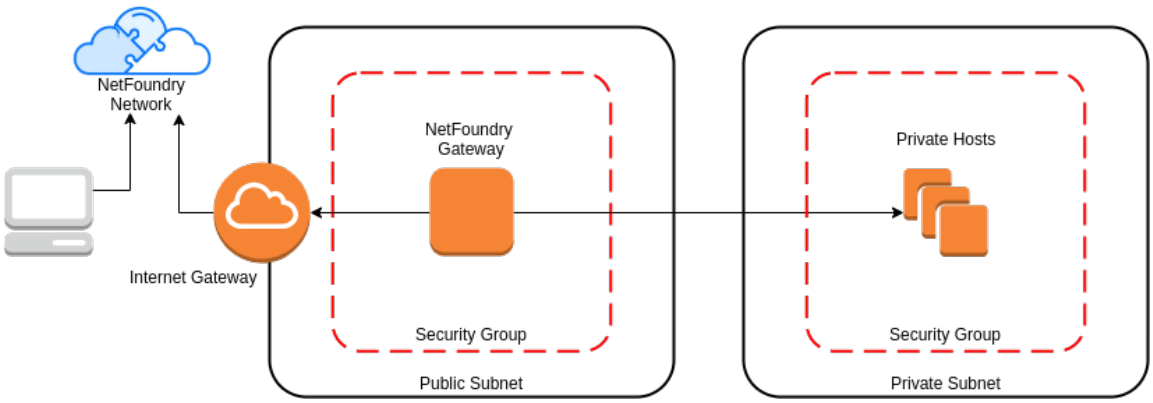
Solution Architecture

Standard Bastion Setup

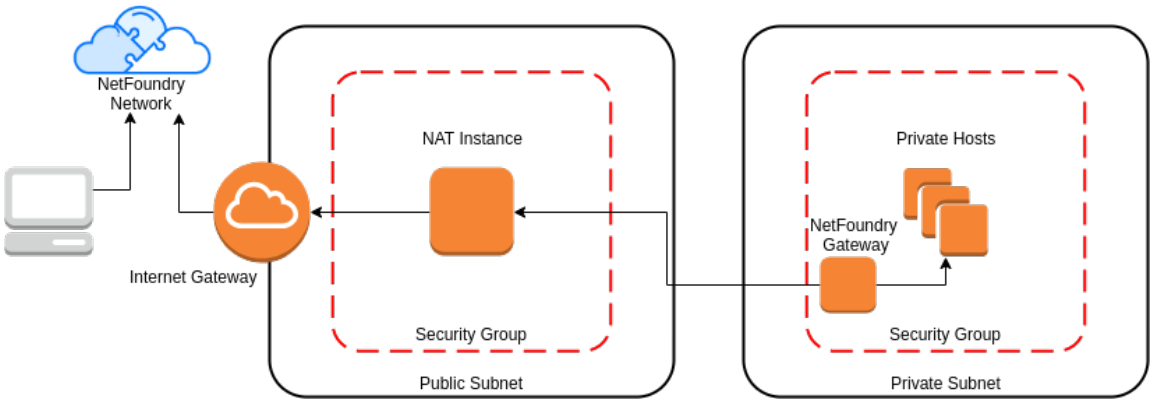


Netfoundry

Public



Private



Important

Assumption is that the NF Fabric is already up and the NF Client is installed.

Implement Through NF Web Console UI

Create and install NF Client

This section will guide a user through the steps on how to create a client in the NF Console UI. Then, it will provide links to Guides on how to install the

NetFoundry Client Software for Windows and MAC Clients, including the registration with the NF Network Fabric.

Console UI

1. Navigate to Manage Clients Page Image
2. Click on + sign in the top right corner.
3. Fill in the required information and click on "Create" Image
4. Copy the Client Registration Key Image
5. Install the NF Client Software by following the directions at the appropriate OS link
    a. Window
    b. Mac

Create and Install NF AWS Gateway

This section will guide a user through the steps on how to create a NF Manage Gateway in the NF Console UI and install it in an AWS VPC.

Console UI

1. Navigate to Manage Gateways Page
2. Click on + sign in the top right corner. Image
3. Click on "Create Gateway" on the AWS Cloud Gateway Card Image
4. Fill in the required information and click on "Create" Image

> **Note**
>
> If this is the first time you've ever launched an AWS NetFoundry Gateway You must accept the AWS license before launching the gateway, please click here: AWS Marketplace

5. Click on "Launch Gateway Using CloudFormation Script". It will take you to the AWS console, if you're not already logged in it will ask you for your login credentials. Image
6. You will be presented with the template parameters that needs to be filled. Image
7. Fill in the AWS Parameters Section with you're VPC & ssh keyname & Click Create Stack.
8. If the NF Gateway was deployed successfully. Here is the view of the NF Conole UI. Image
9. Done

Create IP Network Service

This section will guide a user through the steps on how to create a NF Service.

Console UI

1. Navigate to Manage Services Page under Manage Appwans
2. Click on + sign in the top right corner. Image
3. Click on "Create an IP Network Service" Image
4. Fill in the required information for the Network your wanting to access. Image

   > **Important**
   >
   > Please make sure the service you want to access is behind the gateway you specify here.

5. If successfully, the service is green. Image
6. Done

Create AppWan

This section will guide a user through the steps on how to enable service connectivity to users by creating an appwan.

Console UI

1. Navigate to Manage AppWANS Page under Manage Appwans
2. Click on + sign in the top right corner. Image
3. Click on "Component Builder Appwan" Image
4. Move the desired client (e.g. DemoClient01) from "Available" Clients to "Selected" Endpoints. Move the desired service (e.g. DemoServiceSsh) from "Available" to "Selected" Services. Image
5. Click on "Create". Image
6. Done
