## Secure Connectivity to Cloud Applications

### Overview

We will provide series of quickstart guides on how to quickly deploy and configure Secure Overlay Network via NetFoundry to connect Enterprise Remote Users or Branch Applications/Users to Applications located in various public or private clouds.

### Use cases:

1. Azure Cloud Connectivity
  - a. Use Case Overview
  - b. Mobile User to Cloud Application Connectivity
  - c. Branch Application to Cloud Application Connectivity
  - d. Bastion Host
  - e. Accessing Azure Stack
2. AWS Cloud Connectivity
  - a. Overview
  - b. Bastion Host
3. Google Cloud Connectivity
  - a. Getting Started Guide
4. VCPE
  - a. CPE Automation

#### Note

Regardless of where Applications Users are trying to reach reside, NetFoundry (NF) Network Fabric needs to be provisioned and deployed first. Navigate to NetFoundry/NF Fabric to find more information on how to stand up the NF Network Fabric.
