

Python create service

Update the Resoure.yaml file to include the Service option to create the NF service on the gateway create in the previous step. Don't forget to change the action on the gateway to "get".

```
``` yaml
environment: production
gateway_list:
- action: get
 cloud: azure
 count: 1
 names:
 - AZCPEGWx0xWESTUS
 region: westus
 regionalCidr:
 - 10.20.10.0/24
 regkeys:
 - 21DB86724EC3F31C11C1C9D68CE5ECD6A06F057E
 resourceGroup:
 name: demoPythonTerraform01
 region: centralus
 tag: TerraformDemo
network_action: get
network_name: DemoNet01
terraform:
 bin: terraform
 output: 'no'
 source: ./quickstarts/docs/terraform
 work_dir: .
services:
- action: create
 gateway: AZCPEGWx0xWESTUS
 ip: 10.20.10.5
 port: 22
 name:
 type: host
```
```

1. After the script run again successfully, the service section should have been populated with the service name as so.

```
``` yaml
services:
- action: create
 gateway: AZCPEGWx0xWESTUS
 ip: 10.20.10.5
 name: AZCPEGWx0xWESTUS--10.20.10.5--22
```

```
port: 22
type: host
...

```
